ACCESSORIES	ADDITIONAL RAILS, SLINGS, AND OTHER ACCESSORIES CAN BE ADDED.
WARRANTY	N/A

All Specifications are Averages and Subject to Change

DETAILS

The BML-37 is a box magazine fed 37mm Sage Rifled launcher. It is an innovate alternative to traditional rotary style projectile launchers. Available with various magazine capacities, the BML-37 can operate as a single shot or a multi-shot launcher.

The BML-37 has two safeties: The first type is a cross bolt type similar to most police/military shotguns located above the trigger. The second is an out-of-alignment safety whereby the firing pin is not aligned with the primer until the firing pin is ready to be released through trigger manipulation.

Loading is accomplished from the top of the action through the chamber/ejection port into the magazine. Upon firing the empty cartridge is automatically ejected, allowing you to rapidly fire multiple rounds.
