DETAILS

The GL6 multi-role six (6) shot projectile launcher fulfills current police requirements for a 6-shot multi-role launcher capable of firing 40x46mm NATO munitions.

Having an accurate multiple shot system available to deliver blunt trauma inducing batons, pyrotechnic chemical agents, and non-pyrotechnic barricade penetrating projectiles has become a necessity for the successful completion of many police operations.

Exceptional accuracy by the GL6 is achieved by using a 1:47.25 right hand twist rifled barrel which maximizes the performance of most 40X46mm NATO munitions.

Additional optics, illumination devices, and accessories can also be mounted to the GL6. Available with a fixed, folding, or collapsible stock.
