

DETAILS

The SB2 is a pyrotechnic irritant smoke munition primarily used for crowd management situations. It is designed to be used to deny specific outdoor area occupation and to relocate or move unruly crowds.

Offered in short and long range variations, the SB2 allows the operator the ability to accurately place irritant smoke at varying distances.

Available with either a single source smoke canister, three or five separating smoke canisters, the SB2 provides law enforcement with multiple irritant smoke options for tactical operations. As a single source munition the SB2 can be fired in the air at an upward angle to achieve maximum distance or it can be skip fired on the ground at shorter distances into the target area.

Upon launching the three (3) and five (5) piece SB2 variation, the submunitions will separate in flight and then continue to produce smoke individually. This dispersion effect provides a greater area of smoke coverage and reduces the chance of canister throw-back.

All SB2 variants are pyrotechnic, have fire-producing capabilities, and should therefore only be used outdoors. Not to be fired directly at subjects, as death or serious injury can occur.

MODEL	SB2 - ALL VARIANTS		
CALIBER	37MM SMOOTH BORE		
EFFECTIVE RANGE	SHORT RANGE	75 YDS (68.6 meters)	
	LONG RANGE	150 YDS (137.1 meters)	
OVERALL LENGTH	4.8" (121.92mm)	8.0" (203.30mm)	
PROJECTILE TYPE	ALUMINUM CANISTER		
SB2 VARIANTS	SINGLE SOURCE	THREE CANISTER	FIVE CANISTER
PROJECTILE COUNT	ONE (1)	THREE (3)	FIVE (5)
PROJECTILE WEIGHT	99.2 grams	43.0 grams each	43.0 grams each
ACTIVE AGENT	CS (CHLOROBENZALMALONONITRILE)		
AGENT WEIGHT (NET CS)	24.5 grams	24.5 grams	40.8 grams
DISCHARGE TIME	30 +/- 5 seconds		
WARRANTY	5 YEARS IF STORED PROPERLY		
All Specifications are Averages and Subject to Change
