**DETAILS**

The SB7 is a multi-ball area impact munition that is designed to be used in situations where kinetic energy is preferred for the dispersal of hostile and/or non-compliant crowds.

Available with either .60 caliber or .32 caliber hard synthetic balls, the SB7 is designed to be used to dissuade intruders at medium distances from entering sensitive areas or to relocate or disperse unruly groups by skip firing or deploying the munition in extremely low trajectories towards the general target area.

It is stressed that shot placement is the most important aspect in the deployment of the aforementioned systems and that operators should be properly trained and familiar with using less-lethal impact munitions.

Extreme care should be exercised. Never to shoot directly at a subject as the projectiles could cause serious injury.
