DETAILS

The SB9 is a sub-caliber 37MM Smooth Bore adapter training cartridge chambered for .38CAL or 9MM marking training rounds.

It is designed to be used as a situational training device in conjunction with off-the-shelf non-lethal marking training ammunition, providing the agency with the ability to safely incorporate the use of launchers in force on force training scenarios.

The aluminum cartridge case is anodized "Training Blue" and the 4.4" steel barrel insert is completely rifled and chambered to accept only non-lethal marking munitions.

Accurate out to 10 yards (9.1 meters), with high hit probability at further distances. Also compatible with Speer® Force-On-Force™ and Simunition® FX® munitions.
