SIGHTS	Rear ghost ring aperture and front bead mounted on 1913 Picatinny rail.
ACCESSORIES	Additional rails, slings, optics, and other accessories are available.
WARRANTY	N/A

All Specifications are Averages and Subject to Change

DETAILS

The SL6P 37mm Pump-Action six (6) shot projectile launcher fulfills current police requirements for a launcher capable of firing either Sage Control Ordnance, Inc. or ARWEN 37® munitions.

Having an accurate multiple shot system available to deliver blunt trauma inducing batons, pyrotechnic chemical agents, and non-pyrotechnic barricade penetrating projectiles has become a necessity for the successful completion of many police operations.

Exceptional accuracy by the SL6P is achieved by using a rifled barrel, calibrated sighting system, and a family of ammunition manufactured to standards which maximize performance.

Additional optics, illumination devices, and other accessories can also be mounted to the SL6P.
