All Specifications are Averages and Subject to Change

\* Fitting SAGE EBR chassis to non Mil-Spec/Commercial rifles may require additional gunsmithing.

**DETAILS**

The M1GALCS Enhanced Battle Rifle Chassis Stock System is precision CNC machined from a solid billet of high strength aircraft grade aluminum. Fits Mil-Spec M1 Garand rifles with standard length barrels.

The M1GALCS is a drop-in chassis and features a six position telescoping stock and an adjustable polymer cheek rest with two inches of vertical adjustment.

Additionally the chassis includes five Mil-Spec 1913 Picatinny rails, three ambidextrous sling mounts, a removable Kydex forend with a built in palm swell, and a soft one inch recoil pad.

Rigidity of the chassis increases accuracy and reliability and is achieved through the use of a patented replacement operating rod guide block. Precision machined receiver lug recesses also eliminate the need for additional bedding.

Available in black factory direct and in other colors only through licensed SAGE resellers.
