## Model GR86 Vertical Gun Rack Assembly

Fits in nearly any vehicle  
Self-contained support system

The continuous downsizing of automobiles and the reduction of available space in vehicles has led to the design of the GR86 Vertical Gun Rack Assembly. The GR86 can be adjusted in many ways to accommodate a wide variety of vehicle interiors and equipment. The GR86 is both a practical and economical buy for any law enforcement agency because of its adaptability to most new vehicles without modifications.

GR86 design has taken into account the use of synthetic materials in vehicle dashboards and does not rely on any anchoring to the dashboard. Each anchor point of the GR86 bolts directly into the vehicle floor.

GR86 Vertical Gun Rack Assembly is compatible with a wide variety of lock assemblies such as Smith & Wesson, and Davis.

Sage International Ltd. Model GR86 Vertical Gun Rack Assembly has many features which make it superior to other products now on the market.

- Tripod construction of mounting points which allows mounting on a transmission tunnel, which frees up valuable floor space.
- No mounting points into the dashboard.
- Compatible with folding stocked shotguns.
- Legs adjust for length and for radial movement.

- Leg assemblies are adjustable for radial movement.
- Three flex floor mounting pads which, when combined with adjustments for leg length, rotation and radial movement, give virtually unlimited mounting possibilities.
- Adjustable trigger guard shroud which aids in preventing accidental discharge. Accommodates nearly all Remington, Mossberg, S&W Ithaca, Savage and Marlin shotguns.
- Accepts key or electric locks already in use.
- Accepts standard or extended magazine shotguns.
- Theft deterrent part retention system.
